

Transition

FEATURES & BENEFITS

Ver. 06/2008

Moving fish from starter granules or micro-pellets to one of Martin's grower rations is achieved successfully by using our slow-sinking **Transition Feed**. The ingredients have been selected to maintain a proper feed matrix with respect to protein and fat. Physical quality of the 2.0mm pellet is excellent thereby maximizing fish health in intensive hatchery environments. Levels of crucial vitamins are enhanced to prepare fishes' immune system for transfers from hatcheries and ensure excellent acclimation at grow-out locations.

Guaranteed Analysis:

Crude Protein (min)	46%	Typical (47%)
Sodium (actual)	1.3%	
Crude Fat (min)	23%	Typical (23%)
Vitamin A (min)	10,000IU/Kg	
Crude Fibre (max)	2.0%	
Vitamin D3 (min)	2,800IU/Kg	
Calcium (actual)	1.6%	
Vitamin E (min)	320IU/Kg	
Phosphorous (actual)	0.95%	

Digestibility and Other Specifications:

Digestible Protein-DP (%)	>87%
Omega-3 Fatty Acid Content	~4.6%
Digestible Energy-DE (MJ)	~19.0
Omega-6 Fatty Acid Content	~0.9%
DP/DE (g/MJ)	22.0
Carbohydrate Content	~15.0%
Fat From Fish Sources	>68%
Crude Ash Content	~6.0%

Ingredients: Corn Gluten Meal, Herring Meal, Poultry Meal, Herring Oil, Feather Meal, Soybean Meal, Wheat Flour, Wheat Middlings, Poultry Fat, Lysine, Vitamin E, Vitamin Pre-mix, Choline chloride, Iodized Salt, Mineral Pre-mix, L-ascorbyl 2-monophosphate (Source of Vitamin C).

Storage: Store in a cool dry place. For best results we recommend feeding this ration within 6 months from manufacture date.

Feeding Instructions: Present 2.0mm Transition diet to fish after weaning them from starter micropellets/granules and 1.0mm or 1.5mm pellets. Feed frequently each day to satiation to maximize growth. Multiple hand feedings or with demand feeders is effective. Our feed representative can provide you with more assistance if desired.

Available Size 2.0mm*
Recommended Fish Size to Feed 12-23g 4-5"

*millimetres

Packaging: 25Kg (55.12lb) polyethylene plastic bag (recyclable)
