Michael Bryce

Michael Bryce began raising fish at the age of seven when he was given a 10 gallon aquarium; an event that initiated his life long interest in fish. Over time Michael collected many rare and special fish, replacing numerous small aquariums with many larger ones. A large pond in his backyard allowed for an expansion of his fish collection to include many koi and goldfish. Michael prefers to acquire new fish as babies enabling him to observe their growth and maturation into adulthood. He was especially drawn to larger fish species and the concept of someday building a “mega tank” to give them the aquatic home they truly deserve.

With the help of family and friends, Michael's dream did eventually come true in 1997 with the completion of 50,000 and 15,000 gallon tanks in which to house some of his largest fish. The construction of these mega-sized aquariums has inspired other hobbyists to also build their own large tanks, contributing to the development and ongoing activity with online communities such as Monsterfishkeepers.com where members exchange information and learn from each other.

Michael has been a loyal Martin Mills fish food customer for more than 20 years on the basis of growth performance, longevity, overall health and economy citing that fish breed after being conditioned on Martin PROFISHERENT fish food. A choice diet in particular for Michael's fancy goldfish and colourful koi is Martin Mills' PROFISHERENT Koi & Goldfish food. In 2007, a stunning red & white Ryukin goldfish of Michaels won a 1st place award at the CAOAC (Canadian Association of Aquarium Clubs) Annual Fish Show & Convention.

Martin Mills would like to thank Michael for his continued support and wish him all the best in his fish-keeping passions.
